SANTA SOPHIA CATHOLIC CHURCH AND ACADEMY SELECTS VOICE SMART NETWORKS FOR NEW UNIFIED COMMUNICATIONS SOLUTION

New phone system enhances communications and safety for Staff and Students

SAN DIEGO/ORANGE COUNTY/LOS ANGELES/VENTURA – June 1, 2014 – Voice Smart Networks, a leading provider of unified communications systems, has announced that it has completed the installation of a new Phone System and Wi-Fi network at Santa Sophia Catholic Church and Academy.

The Church, founded in 1956, sustained severe damage in a fire last year. It was during this troubling and chaotic time that the Church fully realized that their old communications systems were inadequate.

"They had an older system in the Church and Parish Office that is no longer being manufactured and a different system in the K-8th Grade Academy. The two systems could not be connected together which complicated internal and external communications, especially in emergency situations," said Dale Stein, a Partner with Voice Smart Networks.

Voice Smart Networks provided Santa Sophia with a Mitel 5000 MiVoice solution which gives them a single unified communications system for both the Church and the Academy.

"We recommended the Mitel 5000 MiVoice because of the many safety features that are needed by schools are built into the MiVoice system. As an example, with the new system the staff is able to communicate immediately with any classroom in an emergency situation and get a voice response from the teacher even if the teacher is unable to pick up the phone," according to Stein.

"We are very thankful for all the consultation and work by Voice Smart Networks," said Father Jacob Bertrand, the Pastor. "From the very early stages they did a thorough analysis our communications issues and needs and designed a new system and services that provided a perfect solution. In addition to providing better communications and safety they also advised us on other technology services which saved us hundreds of dollars per month," he added.

ABOUT VOICE SMART NETWORKS

Founded in 1982, Voice Smart Networks is Southern California's leading voice and Data Company. The company's mission is to increase its customer's profitability, improve their productivity and give them a competitive advantage. Voice Smart Networks is the only provider that protects its customers from the two risks of technology – Cost and Obsolescence.
